

Peek-a-Plate

You can stop ogling other people's food

The Idea

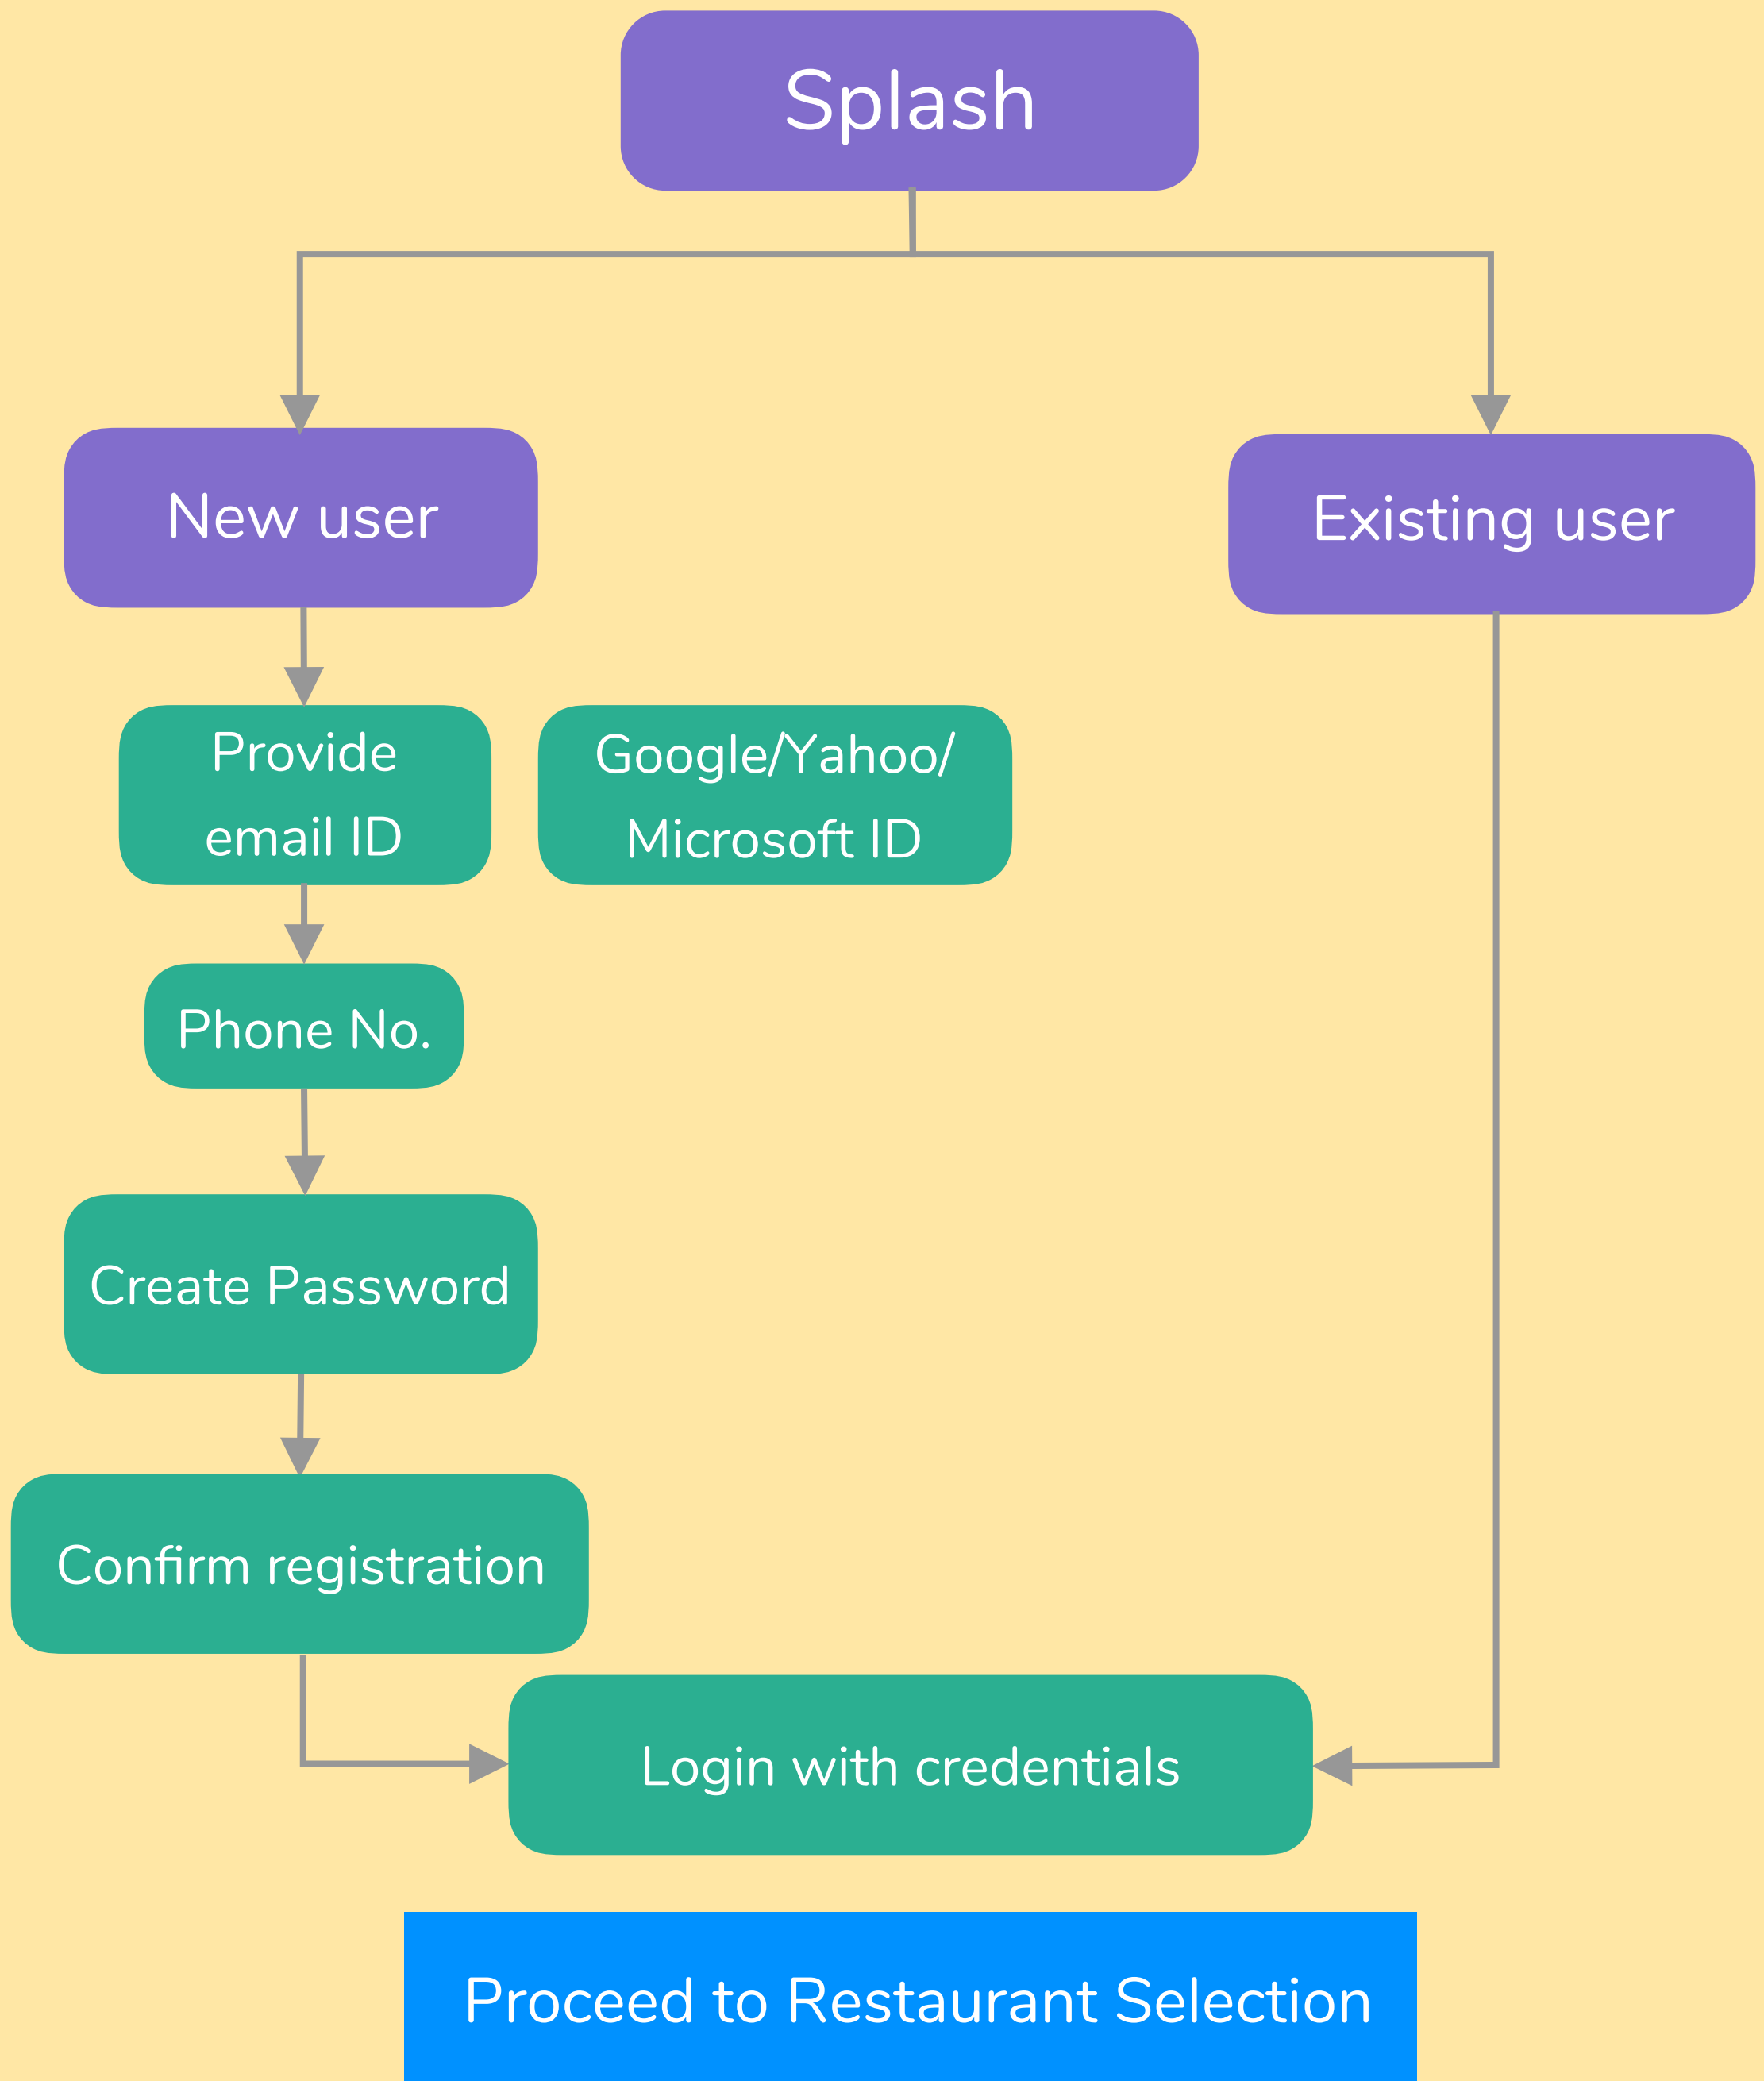

When we visit restaurants the first few times, we're often unfamiliar with the menu and not sure what to order. At times we glance at other people's delicious-looking orders and wonder what it is, but are too hesitant to ask. This app allows you to sync up with a restaurant's order system in real time so you can see items ordered by each table, and you can see the restaurant's map to get a better idea of the table layout. You can also order directly from the app. As a result, you don't have to glance sideways at delicious-looking meals passing you by (or make people uncomfortable by staring at their food), and can take your sweet time in ordering your meal without an anxious server hovering around you.

The Purpose

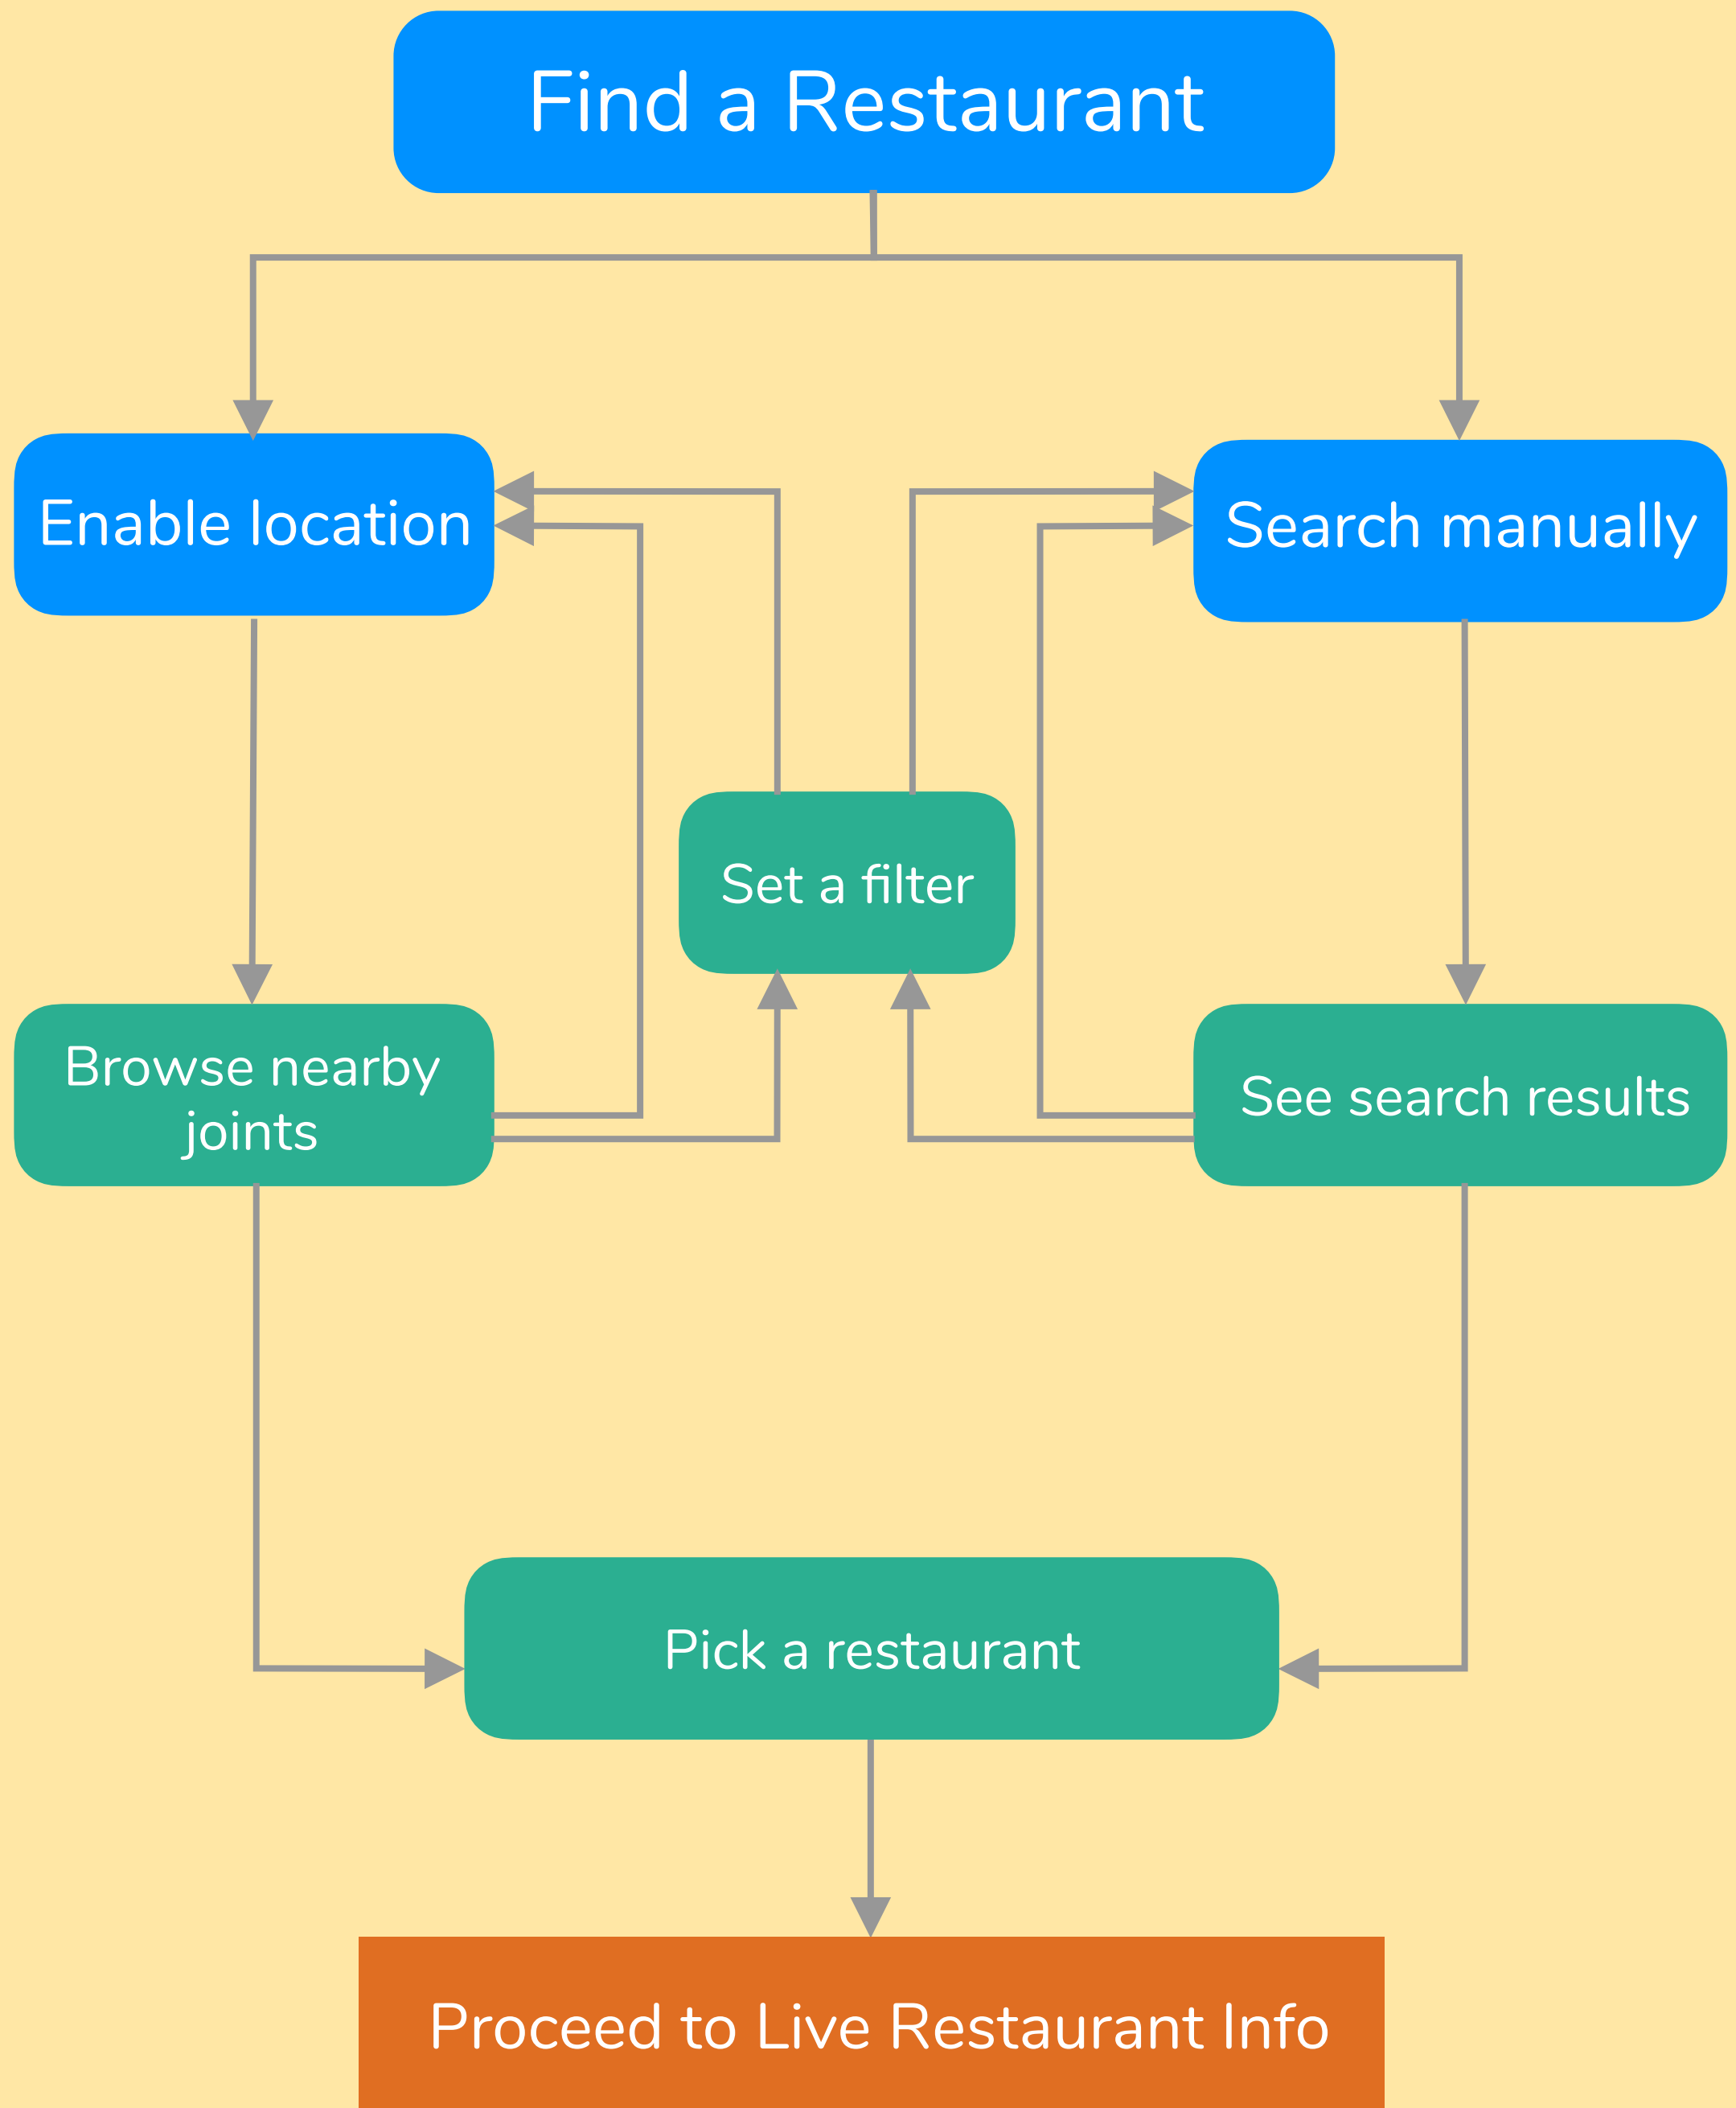

1. It enables a diner to see what's being ordered in real time, enabling them to make decisions faster
2. It's helpful for people who are not comfortable interacting with other diners
3. It will help restaurants to reduce the time spent by servers waiting for order placement, and they can spend time on optimizing serving time and customer comfort
4. It gives diners a better sense of the actual popularity of a restaurant due to the real-time sync with the order system
